To Robert G. Goelet

without whose help the *Dean Bibliography of Fishes*
could never have been started or carried on

Introduction

This computerized bibliographic analysis closely follows the principles and procedures that were developed to produce the initial 1968 volume. In order to make the bibliography virtually self-explanatory, and therefore easier to use, a finding index with detailed cross references has been added, as well as an index of systematic categories and an alphabetical list of serial titles.

In the preparation of this volume, the following persons and institutions have provided vital assistance and support: Miss Louise Schultz and her associates of the BioSciences Information Service, Dr. Donn E. Rosen, Dr. Gareth J. Nelson, and Mrs. Vivian Joan Oleen of the Department of Ichthyology, The American Museum of Natural History, and the Office of Science Information Service of the National Science Foundation (Grants GN-658.1.2.3.4).

During 1972 and 1973, a cooperative arrangement was negotiated between the *Dean Bibliography of Fishes* and *The Zoological Record* of The Zoological Society of London that will result in the incorporation of the *Bibliography* into the *Record* as Section 15 Pisces. The Zoological Society has accepted the *Dean Bibliography* in its computerized form and is also planning to utilize its system of indexing and computerization in the production of all the sections of the *Record*. Transitions from one method of publication to another are difficult at best, and the establishment of a joint publication will entail many small but necessary changes in the indexing and presentation of information. The period of transition will occupy the time that had previously been relegated for the preparation of the 1970 edition of the *Dean Bibliography*. As a consequence, there will be a lapse of one year in the production of the *Dean Bibliography of Fishes* and the next edition will appear as the 1971 Pisces section. The 1970 edition of *The Zoological Record* will contain the Pisces section produced by the regular method of that publication.
